

1. The first group of respondents (Group 1) consisted of 100 individuals who were randomly selected from the population of 1,000. This group was used to estimate the overall mean and standard deviation of the variable of interest.

2. The second group of respondents (Group 2) consisted of 100 individuals who were randomly selected from the population of 1,000. This group was used to estimate the overall mean and standard deviation of the variable of interest.

3. The third group of respondents (Group 3) consisted of 100 individuals who were randomly selected from the population of 1,000. This group was used to estimate the overall mean and standard deviation of the variable of interest.

4. The fourth group of respondents (Group 4) consisted of 100 individuals who were randomly selected from the population of 1,000. This group was used to estimate the overall mean and standard deviation of the variable of interest.

5. The fifth group of respondents (Group 5) consisted of 100 individuals who were randomly selected from the population of 1,000. This group was used to estimate the overall mean and standard deviation of the variable of interest.

6. The sixth group of respondents (Group 6) consisted of 100 individuals who were randomly selected from the population of 1,000. This group was used to estimate the overall mean and standard deviation of the variable of interest.

7. The seventh group of respondents (Group 7) consisted of 100 individuals who were randomly selected from the population of 1,000. This group was used to estimate the overall mean and standard deviation of the variable of interest.

8. The eighth group of respondents (Group 8) consisted of 100 individuals who were randomly selected from the population of 1,000. This group was used to estimate the overall mean and standard deviation of the variable of interest.

9. The ninth group of respondents (Group 9) consisted of 100 individuals who were randomly selected from the population of 1,000. This group was used to estimate the overall mean and standard deviation of the variable of interest.

10. The tenth group of respondents (Group 10) consisted of 100 individuals who were randomly selected from the population of 1,000. This group was used to estimate the overall mean and standard deviation of the variable of interest.
